Noor Sohail

nsohail19.github.io | github.com/nsohail19 | Boston, MA

EDUCATION

University of Michigan May 2020
B.Sc. in Life Science Informatics Ann Arbor, MI

Relevant coursework: Intro Bioinformatics, Biochemistry, Organic Chemistry, Data Structures & Algorithms, Foundations of Computer Science, Web Systems, Discrete Math, Linear Algebra, Probability, Intro Real Analysis

RESEARCH EXPERIENCE

Harvard T.H. Chan School of Public Health Apr. 2023 – Present
Bioinformatician II, Harvard Chan Bioinformatics Core Boston, MA

- Lead end-to-end single-cell and spatial transcriptomic analyses for immunology, skin, gastrointestinal, and neuroscience studies to uncover disease mechanisms, contributing to multiple publications.
- Apply pseudobulk differential expression, gene set enrichment, neighborhood-based differential abundance, and cell-cell communication analysis to compare conditions and identify disease-associated cell states.
- Designed an imputation-based workflow that improves gene co-expression estimates in sparse, zero-inflated single-cell data to prioritize drug targets for a pharmaceutical partner.
- Create and teach workshops on programming basics and advanced data analysis, equipping hundreds of Harvard researchers with practical computational skills.

Memorial Sloan Kettering Cancer Center Apr. 2021 – Apr. 2023
Computational Biologist, Single-cell Analysis Innovation Lab New York, NY

- Served as primary data analyst across many translational projects, including single-cell RNA-seq analysis of CRISPR-engineered mouse tumors revealing how chromosome 9p deletions drive immune evasion (*Nature Cancer*, 2022).
- Assembled an 8M-cell COVID-19 atlas by integrating published datasets and summarizing them into metacells (SEACells), reducing sparsity and making the data tractable for analysis.
- Developed a parallelized pipeline that recovers weak interferon signals from raw reads by rescuing multimapped reads shared across the IFN gene family.
- Engineered a pipeline to call mitochondrial DNA variants from whole-cell ATAC-seq data to trace lineages in cancer.
- Implemented scalable WDL/AWS/Docker processing and QC workflows supporting hundreds of samples across dozens of projects.

Van Andel Research Institute May 2019 – Aug. 2019; May 2018 – Aug. 2018
Summer Research Intern, Triche Lab Grand Rapids, MI

- Maintained and extended MTseeker, an R/Bioconductor package for calling mitochondrial DNA variants and annotating their predicted protein-level effects using a variant database.
- Characterized germline and somatic mitochondrial DNA mutations across pediatric cancers by comparing paired tumor and normal sequencing data (*Cancer Research*, 2019).

University of Michigan Oct. 2017 – Dec. 2019
Undergraduate Researcher, Brooks Lab Ann Arbor, MI

- Computed protein–ligand binding free energies for β-Secretase 1 drug candidates using molecular dynamics (CHARMM) and statistical mechanics (*J. Phys. Chem. Lett.*, 2019).

TEACHING & MENTORSHIP

Harvard Chan Bioinformatics Core | *Workshop Instructor* Apr. 2023 – Present | Boston, MA

- Revised the scRNA-seq workshop, wrote three new workshops, and migrated the training website to Quarto to streamline material development:
  - **Introduction to Spatial Transcriptomics** (link)
    Analysis of spatial transcriptomics data (Visium HD).
  - **Introduction to single-cell RNA Sequencing (scRNA-seq)** (link)
    End-to-end single-cell analysis taught in both R and Python, from experimental design to cell type annotation.
  - **Pseudobulk and Related Approaches for scRNA-seq** (link)
    Sample-level statistical approaches for comparing conditions in single-cell data.
  - **Introduction to Python** (link)
    Introductory Python for data analysis with pandas, Matplotlib, and Seaborn.

Van Andel Research Institute | *Undergraduate Mentor* Jun. 2019 – Aug. 2019 | Grand Rapids, MI

- Supervised two undergraduate students in computational research.

Office of Academic Multicultural Initiatives | *Mathematics Tutor* Jan. 2018 – Apr. 2018 | Ann Arbor, MI

- Tutored first-generation college students one-on-one in Calculus I and II.

SKILLS

Genomics	Xenium, Visium / Visium HD, STEREO-seq, single-cell RNA-seq, scATAC-seq, bulk RNA-seq
Programming	Python, R, bash, SQL, C++
Visualization & Reporting	ggplot2, Matplotlib, Seaborn, Quarto, Jupyter
Infrastructure	Linux, HPC (Slurm, LSF), AWS, Docker, WDL, git
